NOTE: This unit must be “included in the Network” only where it will be permanently installed. The proper operation of this node in the mesh network is dependent on it knowing its location with respect to other nodes. You cannot “test bench” configure this bulb, then install.

**INSTALLATION**

1. At the selected location, turn the power to the light bulb socket OFF.
2. Screw the Smart LED Light Bulb into the lamp socket.

For “Inclusion” to (adding to) a network:

Refer to your Controller operating instructions to add this bulb under the command of the Wireless Controller.

1. With your controller in Inclusion Mode, turn the power to the light bulb socket ON.
2. You should see an indication on your Controller that the “device was included” in the network. The Smart LED Light Bulb will flash twice.
3. The device will appear in the list of Switches. It should display multi-level switch / Linear.

If the Controller/Gateway shows the inclusion failed, repeat Steps 1-3.

✓ NOTE: If you have trouble adding the LB60Z-1 to a group it may be that the Home ID and Node ID were not cleared from it after testing. You must first “RESET UNIT” to remove it from the network. Although adding it to a group includes it in the network, removing it from a group does not remove it from the network. If removed from a group, it functions as a repeater (only). “RESET UNIT” removes it completely from the network.

To Reset Unit (If Required)

To reset the bulb and clear all network information, follow these steps:

1. Use the wall switch to turn the power to the bulb ON then OFF four times within four seconds.
2. The Smart LED Light Bulb will flash twice when the reset occurs.

Before repeating the steps above, try moving the Smart LED Light Bulb to a socket in the same room as the Controller/Gateway in case the preferred socket is out of range initially.

Repeat Steps 1-3 above until the Smart LED Light Bulb is added to the network. Once the bulb has been successfully added to the network, move it to the preferred location.

For “Exclusion” from (removing from) a network:

The Smart LED Light Bulb can be excluded from the network by the Controller/Gateway. Refer to the Controller operating instructions for details.

1. Set the Controller into “exclusion” mode, and following its instruction to delete the LB60Z-1 from the Controller.
2. Reset the bulb by using the wall switch to turn the power to the bulb ON. The Smart LED Light Bulb will flash twice to confirm the exclusion.
## BASIC OPERATION

### Remote Control Operation

The Smart LED Light Bulb can be controlled ON / OFF / BRIGHT / DIM through wireless signals from the Z-Wave remote controller or through a gateway via an application on a smartphone, tablet, or PC.

Once the Smart LED Light Bulb has been added to the network, depending on the functions supported by your controller, it can be assigned to a Group or Scene and operated when the ALL ON or ALL OFF command is received from the Controller. It can also be set in Association with another Z-Wave device to perform a specific duty.

### Manual Operation

The Smart LED Light Bulb can be manually operated using the wall switch while keeping it on-line with the Z-Wave network.

**To manually turn the Smart LED Light Bulb ON:**

Flip the wall switch OFF then ON. Be sure the switch is ON when finished.

**To manually turn the Smart LED Light Bulb OFF:**

Flip the wall switch OFF then ON twice within two seconds. Be sure the switch is ON when finished.

## CONFIGURATION

The LB60Z-1 supports the Configuration command. The LB60Z-1 can be configured to operate slightly differently than how it works when you first install it. Using the Configuration command you can configure the following:

### Parameter 1: Dim Level Memory

By default, the LB60Z-1 bulb will go to full brightness when turned on. To have the bulb turn on to the last dim level setting, set parameter 1 to 1.

- **Parameter No:** 1
- **Length:** 1 Byte
- **Valid Values:** 0 (default) or 1.
  - When the value = 0, the bulb will be full brightness when turned on.
  - When the value = 1, the bulb will turn on to the last dim level setting.

### Z-Wave Plus Features

The LB60Z-1 contains a Z-Wave 500 Series Module that supports Z-Wave Plus features. A Z-Wave certified portable or stationary controller can communicate with the Z-Wave 500 Series Module.

Depending on the capability of the controller or gateway software, the following operations can be performed with the Smart LED Light Bulb. Refer to the controller or gateway manual for details.

- Turn the bulb ON and OFF.
- Dim the bulb.
- Add (Include) or Delete (Exclude) the Smart LED Light Bulb.
- Assign the Smart LED Light Bulb to a specific Group/Scene and/or to include the bulb as part of ALL ON or ALL OFF system commands.
- Over-the-air firmware update by the gateway or static controller.
- Lifeline function which automatically notifies the associated modules and the network that a manually reset device is no longer in the network, thus, the corresponding association becomes invalid.

## INTEROPERABILITY WITH Z-WAVE DEVICES

A Z-Wave network can integrate devices of various classes of products, and these devices can be made by different manufacturers. The LinearLinc Smart LED Light Bulb has Z-Wave certification which guarantees interoperability.

## ASSOCIATION

The LB60Z-1 supports one Group with five Nodes for lifeline communication. Group 1 must be assigned the Node ID of the controller to which unsolicited notifications from the LB60Z-1 will be sent. The Z-Wave controller should set this association automatically after inclusion. You can associate up to five Z-Wave devices to Group 1. Lifeline association only supports the “manual reset” event.

For instructions on how to “set lifeline association” please refer to your wireless controller instructions.

## SPECIFICATIONS

## REGULATORY INFORMATION

The LB60Z-1 is certified to comply with applicable FCC and IC rules and regulations governing RF and EMI emissions.

**FCC ID:** EF400126  **IC #: 1078A-00126**

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference received that may cause undesired operation.

### FCC Notice

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician to help.

**IC Notice**

This Class B digital apparatus complies with Canadian ICES-003

A cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

**WARRANTY**

This Linear product is warranted against defects in material and workmanship for twelve (12) months. This warranty extends only to wholesale customers who buy direct from Linear or through Linear’s normal distribution channels.

Linear does not warrant this product to consumers. Consumers should inquire from their selling dealer as to the nature of the dealer’s warranty, if any. There are no obligations or liabilities on the part of Linear Corporation for consequential damages arising out of or in connection with use or performance of this product or other indirect damages with respect to loss of property, revenue, or profit, or cost of removal, installation, or reinstatement.

All implied warranties, including implied warranties of merchantability and implied warranties for fitness, are valid only until Warranty Expiration Date as labeled on the product. This Linear LLC Warranty is in lieu of all other warranties express or implied. All products returned for warranty service require a Return Product Authorization Number (RPA#). Contact Linear Returns at 1-855-546-3279 for an RPA# and other important details.

**IMPORTANT!!!**

Linear radio controls provide a reliable communications link and fill an important need in portable wireless signaling. However, there are some limitations which must be observed.

- For U.S. installations only: The radios are required to comply with FCC Rules and Regulations as Part 15 devices. As such, they have limited transmitter power and therefore limited range.
- A receiver cannot respond to more than one transmitted signal at a time and may be blocked by radio signals that occur on or near their operating frequencies, regardless of code settings.
- Changes or modifications to the device may void FCC compliance.
- Infrequently used radio links should be tested regularly to protect against undesired interference or fault.
- A general knowledge of radio and its vagaries should be gained prior to acting as a wholesale distributor or dealer, and these facts should be communicated to the ultimate users.
